

In this task, you must conceptualize 6 scenes in which the subject is jumping\* in the photograph.

The subject of these photographs must be photographed using a very **fast shutter speed** so that they have the appearance of *floating or flying* in the photograph.

Photographs must be interesting and technically well photographed.

Still not sure? Check out these other examples:

<http://yowayowacamera.com/> and [Phillipe Halsman – Jump Book](#) and [More](#)

**\* Want to try this idea out with different types of motion?**

**Try putting together a collection of six images that ‘freeze’ movement in the moment.**

**Ideas might be...**

- Running water
- People running/jogging,

- Something being blowing in the wind
- A bouncing ball
- Something or Someone spinning

**Shutter-Speed Process (4 Pictures):** *Make note of your settings for each photo.*

1. Use Manual Mode on your camera. Set the ISO based on the lighting you are in.
2. Set-up camera at an appropriate distance from a 'moving' subject.
3. Set a **FAST Shutter-Speed (Ex: 1/1000)**; adjust the Aperture until the Light Meter reaches "0"; take picture.
4. **Review images**—can you see frozen movement? **YES**—go back to class. **NO**—try from the beginning OR see Mr. Goldsack.

**Once you have your 6 photographs, use PowerPoint (Export -> PDF) to display your images.**

**Complete the Self-Assessment Form and email both to Mr. Goldsack 😊**
