Excel 1 – Play Ball!

Excel (or any spreadsheet software) is commonly used to store, organized, and sort different types of data. This data can be used for a wide range purposes like predicting trends, balancing budgets, planning schedules, and making calculations.

One of the biggest trends in sports in recent years is *sports analytics*. Today, many teams hire data analysts to make help make predicts on player output, ticket sales, post-season performances, and so on. And one of the biggest tools these data analysts use is spreadsheets.

TASK: Replicate the data provided on Page 2 of this PDF in an Excel workbook.

Criteria (*What I am looking for*):

- Use Excel to replicate MLB data. (*3 mark*)
- All data present. (*10 marks*)
- Stylize table. (*5 marks*)
    - Headings
    - Font types and sizing
    - Organization
    - Colours (Pictures?)
- File named appropriately. (*2 mark*)
    - Ex. SmithBobMLB
- Share file via email
