

Isolating Colours

Photoshop Skills

There are multiple ways to isolate colours within an image, using Photoshop. Below is one of the most common methods...

Process:

1. Duplicate the layer - Layer -> Duplicate Layer
2. Work on the top layer
3. Select All
4. Image -> Adjustments - Desaturate.
5. Add a Layer Mask and make sure that your colour pallet is black and white.
6. Use the Brush Tool to remove areas that you want to have in colour!

Cool Trick - Once you have set up your Black & White and Colour Layers, switch their spots in the layers panel. Now you can make one item or are Black & White with Colour all around it.

Good luck!
