# How to Zip an Xcode Project

When you are creating an Xcode project, you have to select where to save it. In this case I saved this project to my Desktop.

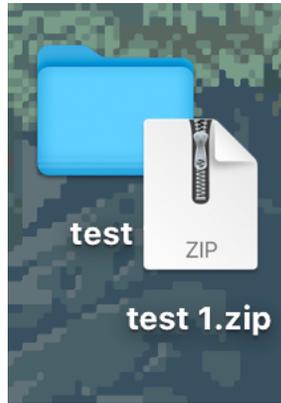

This project folder was created on my Desktop when I hit "Create". It is named the same thing I named

1. Right click or control + click on the folder, and select "Compress"

2. The zip file created can be submitted in Google Drive or sent on Zoom

Do **NOT** open the folder and send anything within separately.

If you open this folder, these are the contents

Do NOT zip and send these files separately

If you open this folder, these are the contents

Do NOT zip and send these files separately
