

Scratch Review - Example

Name: Sunrise in Seattle - A Parallax

What to do:

- View the Seattle landscape.
- Listen to music.

Features:

- Background music
- User controls through mouse movement
- Scene moves with mouse movement (perspective)
- Occasional repeats of birds in the sky

Difficulty:

- Simple gameplay; user presses play.
- Internally the program is somewhat complex. All the parts of the scene are were created individually and react according to user mouse movement.

(Optional) Verdict:

- This is a relaxing program that doesn't require the user to do much. It's fun to interact with. I give it a 4/5
