

The Nintendo Entertainment System (NES) is a home video game console. It is used for entertainment and sometimes educational purposes.

The NES was designed by Nintendo in Japan in 1983.

It is known as the Famicom.

In future, the NES could be a hand-held item or even allow people to play against each other in other homes, cities, or countries. The possibilities are endless!

There are many games in development for the NES. Over the next couple of years there will be 100s of games.

Spotlight: **Nintendo Entertainment System**

The NES is different from arcade machines because it uses cartridges to allow users to change the game at any time.

The North American version of the NES is much different from the Famicom. Our version looks more industrial while the other looks like a toy.

The NES appeals to people of all ages. From adults to teens to kids, there are games and challenges for everyone.
